

StrToRelTimeEx

%StrToRelTimeEx function

Function

The function converts a text string to a value of *Relative time* type according to given [mask](#).

Declaration

```
REAL %StrToRelTimeEx(  
    TEXT in String1,  
    TEXT in String2  
)
```

Parameters

string1	Text string.
string2	Mask.

Description

Mask (the parameter *String2*) used in the function is extended as follows:

1. number of days can be defined:
 - d
 - dd
 - ddd
 - dddd
2. number of hours can be defined:
 - h
 - hh
 - hhh
 - hhhh

Example

```
%StrToRelTimeEx("17:03:16", "hh:mi:ss")
```
