

D2000 DDE Server Process

D2000 DDE Server is a client process of the real-time information system D2000. It has been designed to make D2000 system information available to other applications supporting the DDE interface. An advantage of the mentioned access is, that during work a system user is not limited by the quantity and variety of standard system tools. The process **D2000 DDE Server** can be operated on Windows Vista platform and higher.

An appropriate tool that enhances the D2000 system features in the area of data processing is Microsoft Excel. Excel allows creating various print arrangements with a quality graphic layout and realization of more complicated statistical calculations.
