

SaveTimeStamps

%SaveTimeStamps function

Function

[Controlling function](#), which enable/disable change of the timestamp at setting the parameters of local values or objects in D2000.

Declaration

```
%SaveTimeStamps(  
    BOOL in _bSaveTimeStamps  
)
```

Parameters

bSaveTimeStamps	@TRUE - allows @FALSE- disallows Change of timestamp at assignment.
------------------------	---

Description

[Controlling function](#), which enable/disable change of the timestamp at setting the parameters of local values or objects in D2000.

After script start preservation of timestamp is not activated.

E.g. assignment executing:

Example

```
INT _i  
_i := 1 + 1
```

value 2 is set for local variable *_i* whereby
real time is set for timestamp (e.g. *10:10:11 22-4-2008*).

Following row disables timestamp actualization:

```
%SaveTimeStamps (@FALSE)
```

Following assignment sets new value (3) to the local variable without timestamp change.

```
_i := 2 + 1
```

This attribute is applied within inferences!!!

E.g. by reading values from archive (action [GETARCHARR](#)) the read values from archive are assigned to the final column **without affecting their timestamps!!!**
