

GetOemProtName

Declaration

```
void (_stdcall *GetOemProtName)(unsigned int spProtocol, char *ProtName);
```

Parameters

spProtocol	Numeric protocol ID (OEM_Prot1 to OEM_Prot16) - spProtocol item from the StationPar structure
ProtName	A pointer to a buffer with a size of at least 81 characters.

Description

The function returns to the buffer pointed to by the ProtName parameter, the name of the OEM protocol, which is defined in the [parameters of the D2000 Server](#) as the application parameter OEM_Prot1_Name to OEM_Prot16_Name.

Note: The OEM protocol name can be used to distinguish between implementations of multiple OEM protocols (or variants thereof) that a single OEM library may contain.
