

END

END action

Function

Termination of the script execution.

Declaration

```
END
```

Note

[Active picture.](#)

Examples

Explicit ending of a script

```
INT _a
PROCEDURE Procedura
_a := _a + 5
END Procedura

BEGIN ;initialization part - explicit beginning
_a := 2
  CALL Procedura
END ;initialization part - explicit ending
```

Implicit ending of script

```
INT _a

PROCEDURE Procedura
_a := _a + 5
END Procedura

;initialization part - stated implicitly
_a := 2
  CALL Procedura
;end of script = end of initialization part
```
