

Workbook Parameters

Workbook parameters

The dialog box is used to configure the parameter (values of the [predefined cells](#)) in the current workbook for use in:

- 1. Process [D2000 HI](#).
- 2. MS Excel environment.
- 3. Export/Print.

The workbook must be created from the template D2000_WorkBook.xlt because such a workbook contains the predefined cells (**USER_NAME**, **PASSWORD**, ...).

Selecting the option **Workbook parameters configuration** from the menu **D2000 WorkBook** open the following dialog box.

Firstly, you must select one of the following options:

- **HI** - the report will be used in process [D2000 HI](#).
- **MS Excel** - the report will be used in the MS Excel environment - you can define the parameters **User name**, **Password** and **Computer name with D2000 Server** for automatic logon to the D2000 system. If the parameters are not defined, the user must log on when opens the report.
- **Export/Print** - the report will be used for [automatic export](#) or [automatic print](#) using the program **startexcel.exe**.

The following table shows when the other parameters in the dialog box must or mustn't be defined:

Parameter/Use	HI	MS Excel	Export/Print
User name	Unused	Optional	Required
Password	Unused	Optional	Required
Computer name with D2000 Server	Unused	Optional	Required*
Description for Log database	Unused	Optional	Optional
Missing value when reading from archive	Optional	Optional	Optional

- unused - value is not used
- optional - if the parameter is defined, it will be used
- required - the parameter must be defined

* If the parameter is not defined, the report can be used only on the computer with [D2000 Server](#).
