

# ON GOTO

## ON GOTO action

Function	The action implements a multiple branch.		
Declaration	<pre>ON expression  GOTO Label1 [,Label2, ... ,Label10]</pre>		
Parameters	expression	in	<a href="#">Expression of <i>Int</i> type.</a>
	label1, label2, ..., label10	in	Labels. Maximum: 10.
Description	<p>labelX - the label, to which the script jumps, where the value of the expression <i>expression</i> is X. The maximum number of labels is 10. For example, if the value of <i>expression</i> is 3, the script jumps to the label <i>Label3</i>. If the value of the expression <i>expression</i> is greater than the label number, the script interpreter ignores the action and continues executing the following action.</p>
