REBUILD_ACC

REBUILD_ACC action

Function

Handling an error occurrence.

Declaration

```
REBUILD_ACC
```

Description

The action completely updates access rights for all logged in users. It must be called after the change of access rights (e.g. using the actions RES_GROUP_INSERT, RES_GROUP_DELETE). Otherwise, changes for particular user will be applied after his/her logoff from all of the D2000 system processes (D2000 CNF, D2000 GrEditor, D2000 HI, ...).

For wide configurations of access rights, the action may take some time.

Example

```
BEGIN
 RES_GROUP_INSERT group, D.graf
 REBUILD_ACC
END
```
