

REBUILD_ACC

REBUILD_ACC action

Function

Handling an error occurrence.

Declaration

```
REBUILD_ACC
```

Description

The action completely updates access rights for all logged in users. It must be called after the change of access rights (e.g. using the actions [RES_GROUP_INSERT](#), [RES_GROUP_DELETE](#)). Otherwise, changes for particular user will be applied after his/her logoff from all of the D2000 system processes ([D2000 CNF](#), [D2000 GrEditor](#), [D2000 HI](#), ...).

For wide configurations of access rights, the action may take some time.

Example

```
BEGIN
  RES_GROUP_INSERT group, D.graf
  REBUILD_ACC
END
```
