

# MakeRGB

## %MakeRGB function

### Function

The function transforms the color expressed by the items **R**, **G** and **B** to a value.

### Declaration

```
INT %MakeRGB(  
    INT in R,  
    INT in G,  
    INT in B  
)
```

### Parameters

<b>R</b>	Amount of red color in final color.
<b>G</b>	Amount of green color in final color.
<b>B</b>	Amount of blue color in final color.

The numerical values of the parameters **R**, **G** and **B** must be within the interval 0..255.

### Description

The final value is calculated as follows:

**R** + 256\***G** + 65536\***B**.

The final value is usable as a value to express the color in functions, which directly works with colors (%HI\_SetForeColor, ...).
