

# FIO\_Close

## %FIO\_Close function

**Function** The function closes the specified file. The file must be opened.

**Declaration**

```
BOOL %FIO_Close(  
    INT in handle  
)
```

**Parameters**

<b>handle</b>	The value of a file, returned by the functions <a href="#">%FIO_Create</a> <a href="#">%FIO_OpenAppend</a> or <a href="#">%FIO_OpenRead</a> .
---------------	---

**Return value**

@TRUE - file closed, @FALSE - cannot close the file.
