

RELEASEACCESS

REDIM action

Declaration

```
RELEASEACCESS strExpression_Str [PUBLIC]
```

Parameters

strExpression_Str	in	Expression of String type, that defines the name.
-------------------	----	---

Description

The action unregisters the name defined by the expression *strExpression_Str*. The unregistering is performed only in case, if the given name has been registered by the same installation (ESL script). If the instance is terminated without the unregistering of all registered names, then they are to be unregistered automatically.

The keyword **PUBLIC** will provide the unregistering of an published name (see the action [GETACCESS](#)).

Example

[Example](#) for the actions **GETACCESS** and **RELEASEACCESS**.
