

GetKnownTimeZones

Function %GetKnownTimeZones

Function	The function returns list of known time zones.		
Declaration	<pre>%GetKnownTimeZones(in refToColumn)</pre>		
Parameters	<table><tr><td>refToColumn</td><td>Reference to a column.</td></tr></table>	refToColumn	Reference to a column.
refToColumn	Reference to a column.		
Description	The Function fills text column defined by reference <i>refToColumn</i> with a list of known time zones. All of the time zones from this list can be used as a time zone parameter in date and time manipulation functions. The column is defined by the reference to an item from this column (e.g. <code>_rec^item</code>). The structure is automatically redimensioned to a required number of rows.
