# D2000 ODBC Driver

**D2000 ODBC Driver** is an ODBC driver, that allows the applications which use this standard interface (e.g. Microsoft Excel, Microsoft Query, Crystal Report) to access D2000 system data. It allows access to current values of the D2000 system, as well as data from the archive of historical values.

**Note:** Since D2000 version 9.2.34, both 32 and 64-bit versions of the driver are available.
