

Object configuration properties

Dialog window displays the parameters that are assigned to some configuration properties of objects and their change. It opens through the [pop-up menu](#) - an item **Used configuration properties**, in the [selection window](#) or from the [configuration window](#) of object by clicking with right mouse button -> the item **List configuration properties**.

In these dialog window you can change or remove the assignment of parameter to one or more object configuration properties.

If the dialog box is opened through the [pop-up menu](#) from the selection window or from the [extended actions](#) of the object *Application module* only the parameterized configuration properties will be displayed.

The column **Valid** shows whether the parameter assigned to some object configuration property exists. User can find out a useful information on objects of which parameterization should be updated because of changes in [parameters of application module](#).
