

D2000 Archiv

D2000 Archiv is the process providing for the acquisition, processing, and distribution of historical values. It is used to archive all D2000 system objects, which have a value. Using a database of SQL type allows to archive a large data quantity and provides a high level of data integrity.

For more information about supported SQL databases, see [Data archiving in the D2000 system](#).

Possible use of the archive:

- Displaying historical values in the form of graphs (via [D2000 HI](#)).
- Print of protocols, reports, and compositions (via [D2000 WorkBook](#)).
- Calculation of statistics (statistical and calculated historical values).
- Reading and writing from/to the archive, recalculations of statistics and calculations on-demand from [the script](#).
- Export of data into other systems from the script.
- Data provision for various interfaces ([D2000 JAPI](#), [D2000 ObjAPI](#), [D2000 ODBC Driver](#), [D2000 VBApi](#)).

The process **Archiv** has no desktop for interaction with users.
