

CNT_GETITEM

CNT_GETITEM action

Declaration

CNT_GETITEM _hContainer, _index, _value

Parameters

_hContainer	in	Identifier of <i>Int</i> type - data container.
_index	in	Sequence number of item (from 1...) of the array created by the action CNT_CNVTOARRAY .
_value	output	Value from the container, if the value of the parameter <i>_bFound</i> is @TRUE, otherwise the value of the parameter remains unchanged.

Description

The action reads the value from the [data container](#) given by its sequence number (the *_index* parameter) and inserts it into the *_value* parameter.

Analogous to the action [CNT_FIND](#), the *_value* parameter must be of proper type.

The *_index* parameter may be a value within the interval 1...*_nr*, while *_nr* is returned by calling the [CNT_GETNR](#) action.

Note

The [CNT_CNVTOARRAY](#) action creates an array for accessing the values of the container by means of index.

Example

[Work with data container \(actions CNT_...\)](#).
