

Arrange Graphic Information Windows on HI Process

Arranging graphic information window on HI desktop

Windows, opened on HI desktop can be arranged, moved or resized.

Moving the windows

Every window opened on HI desktop (picture, graph, control window, information window, etc.) can be placed to required position on the HI process desktop.

To move a window

1. Point the mouse cursor to the window title bar.
2. Press and hold down the left mouse button.
3. Drag the window and release the mouse button when the window is on required position.

Automatically arrange windows

Graphic information windows (pictures, graphs), opened on HI process desktop, can be arranged by means of HI process functions:

- cascade – select the **Cascade** item from the **Window** menu,
- horizontally – select the **Tile horizontally** item from the **Window** menu,
- vertically – select the **Tile vertically** item from the **Window** menu.

Maximize windows

If you maximize a graphic information window ( button in the window title bar) then this window covers the whole HI process desktop. At the same time the window name is displayed in the HI window title bar. The window becomes the background of process [D2000 HI](#) over which further graphic information windows can be opened.
