

Requirement for status of archive block

This requirement is intended for identification of status of archive block. The format of [DDE reference](#) is following:

= D_2000 | ARCH_DATA ! b1name

D_2000 - DDE Server name (required).

ARCH_DATA - requirement for status of archive block.

b1name - logical name of archive block (COM_ID).

Possible statuses (value of reference):

- **DATA_OK** – the required values from archive are available for processing,
- **NO_REGISTERED** – archive block of the particular name has not been registered,
- **LOADING_ARCH_DATA** – data loading from archive,
- **NO_ARCH_OBJ** – non existing archive block or when registering the block, different object has been chosen than historical one
- **NO_UNIQUE_NAME** – ambiguous name

The example of DDE reference is - [here](#).
