

Requirement for archive value

Requirement for particular archive value

A requirement for a particular value from an archive block can be defined by similar way as the requirement for the instantaneous value of object in D2000 System. The format of [DDE reference](#) is:

= D_2000|info!bname_N

D_2000 - DDE Server name (required).

info - type of information about an archive object. There can be these acceptable values:

- **ARCH_VALUE** – [value of archive object](#)
- **ARCH_TIME** – [value time](#)
- **ARCH_STATUS** – [status of archive object](#)
- **ARCH_FLAGS** - [value flag](#)

bname_N is a string consisting of:

- **bname** - logical name of archive block (COM_ID)
- **N** – consecutive number of archive value within the archive block.
