

Microsoft Excel and DDE Server

Microsoft Excel is a client process in relation to DDE Server. MS Excel gets data from **D2000 System** via DDE Server. It provides a lot of tools to process data.

Before you start to process data from **D2000 System** in Microsoft Excel, you should do these steps:

1. [Install D2000 add-in to Excel](#)
2. [Open a new workbook from the template D2000.xlt](#)
3. [Set a calendar system on 1900](#)
4. [Set automatic recalculating of a workbook in Excel](#)
