

Automatic Print

Automatic report printing

Analogous to automatic report export, you can carry out the automatic report printing on a printer. Unlike the declaration of automatic report export, the last parameter is not **EXP** but it is **PRN**.

```
startexcel [/I] fullXlsPath StartParams PRN
```

Such a running will print the current (visible) sheet of defined workbook of the default printer. Default printer is the printer defined in the MS Excel environment after opening the option **Print**.
