

Types of DDE references

When choosing the item **List of object** from **D2000** menu, a dialog window opens. It contains the following types of DDE references:

- **None** – only the name of object will be inserted to the cell
- **Value** - DDE reference that requires an object value
- **Time** – DDE reference that requires a create time of object value
- **Status** – DDE reference that requires an object status
- **Flags** – DDE reference that requires a flag of object value
