StartProject

StartProject utility

The utility allows users to run the program **MS Project**, open a document (*.mpp) and possibly run a macro with parameters.
The utility **StartProject** (the file *StartProject.exe* is located in the subdirectory **Bin** of the installation directory) and can be run with the following parameters:

Declaration	**startproject** [/Q] [/I] fullMppPath **[StartMacro [param1 .. paramN]]**		
Parameters	/Q	Enables writing possible errors into the log file (startproject.log) and termination the utility **StartProject** if any errors occur.	
	/I	Runs the MS Project as visible. Optional parameter.	
	fullMppPath	Full path to the document (*.mpp).	
	StartMacro	Optional name of the macro in the document, that is to be executed.	
	param1 .. paramN	Optional parameters of the macro **StartMacro.**	
Description	The utility **StartProject** runs the MS Project. If the parameter */I* is defined, the MS Project will be opened as visible. If the parameter */Q* is entered, possible errors will be written into the file *startproject.log* and the utility StartProject will be terminated. Then the file defined by the parameter *fullMppPath* will be opened and the macro **StartMacro** will be called with optional parameters **param1 .. paramN**. The macro must be implemented in the file.
