

# StartWord

## StartWord utility

The utility allows users to run the program **MS Word**, open a document (\*.mpp) and possibly run a macro with parameters.  
The utility **StartWord** (the file *StartWord.exe* is located in the subdirectory **Bin** of the [installation directory](#)) can be run with the following parameters:

Declaration	<b>startword</b> [/Q] [/I] fullDocPath [ <b>StartMacro</b> [ <b>param1</b> .. <b>paramN</b> ]]	
Parameters	/Q	Enables writing possible errors into the log file (startword.log) and termination the utility <b>StartWord</b> if any errors occur.
	/I	Runs the MS Word as visible. Optional parameter.
	fullDocPath	Full path to the document (*.doc).
	<b>StartMacro</b>	Optional name of macro in the document, that is to be executed.
	<b>param1</b> .. <b>paramN</b>	Optional parameters of the macro <b>StartMacro</b> .
Description	The utility <b>StartProject</b> runs the MS Word. If the parameter <i>/I</i> is defined, the MS Word will be opened as visible. If the parameter <i>/Q</i> is entered, any errors will be written into the file <i>startword.log</i> and the utility <b>StartWord</b> will be terminated. Then the file defined by the parameter <i>fullMppPath</i> will be opened and the macro <b>StartMacro</b> will be called with optional parameters <b>param1</b> .. <b>paramN</b> . The macro must be implemented in the file.
