

Change Password (Access to the HI Process)

Change password

User's logon password can be simply changed. Selecting the **Change Password** from the **System** menu opens the following dialog box.

A screenshot of a Windows-style dialog box titled "Change password". The dialog box has a standard title bar with a close button (X) in the top right corner. Inside the dialog, there is a small icon of a wrench and screwdriver on the left, followed by the text "Change user password". Below this, there are three input fields, each preceded by a label: "Old password:", "New password:", and "Confirmation:". Each input field contains a series of black dots, indicating that the text is masked. At the bottom of the dialog, there are two buttons: "OK" and "Cancel".

To change user password:

1. Type the old password you want to change into the **Old password** input edit box.
2. Type a new password into the **New password** edit box and then also into **Confirmation** input edit box to verify correctness of typing.
3. Click the **OK** to confirm your changes.
