

Selection of One Graphic Object

Selection of one graphic object

To select one object.

1. On the [Drawing toolbar](#) click the button **Select object** .
2. Point the mouse cursor on the outline or on the graphic object and click.

When the object is selected, it is outlined by a dashed line rectangle with black squares placed in the corners and sides (position of squares depends on the graphic object type). Such a selected object can be edited - moved, resized, changed its color etc.

The following examples show selected graphic objects.

Seeing that several graphic objects can be placed in one position in a picture, a situation when you have selected other object than you want can occur. In this case do the follows.

Go to other graphic object

1. Press and hold down the ALT key.
2. Point the mouse cursor to the graphic object you want to select and click.
3. Keep clicking until you select required object.
4. Release the ALT key.

Unselect the object selection

To unselect a selected graphic object, click anywhere on the picture except the area of the graphic object. The graphic object can be unselected by clicking a button in the [Drawing toolbar](#), too.
