

OnFinish

OnFinish picture event

Declaration

```
ENTRY OnFinish
; actions
END OnFinish
```

Parameters

None

Description

OnFinish event is called before closing a picture after [OnClose](#) picture event. **OnFinish** event is sent to all subpictures, which uses this event, and the picture is closed after finishing the event in the scripts. The calls are done sequentially, one after another. Every picture receives it after calling all its subpictures.

Example

```
ENTRY OnFinish
  _Loc := %HI_GetPosX(_Txt)
END OnFinish
```

Note

This event is used to collect data from the picture, e.g. column width in a browser, at closing the picture, etc..
