OnHistoryTime

OnHistoryTime picture event

Declaration

```
ENTRY OnHistoryTime(IN TIME _newTime)
; actions
END OnHistoryTime
```

Parameters

_newTime	Time of the picture.

Description

The picture event is being generated by a change of the picture time in the History mode. There are the following examples:

- the first entry into script after the picture was switched to *History* mode (OnHistoryBegin); data from archive exist there, time is set on begin of interval or it is set according to request from script that was sent after the history had been activated
- change of history time
- deactivating the *History* mode in the picture

The value of the parameter _newTime will be invalid for the third example (deactivating the *History* mode).

Example

```
BOOL _blnHistory  ; variable that specifies whether the History mode is
or is not activated
 TIME _historyTime ; current history time, if exists

 ENTRY OnHistoryTime(IN TIME _newTime)
   IF _newTime\VLD THEN
     IF ! _blnHistory THEN
       ; activating the History mode
       _blnHistory := @TRUE
     ENDIF
     ; history time
     _historyTime := _newTime
   ELSE   ; deactivating the History mode
   _blnHistory := @FALSE
   ENDIF
END OnHistoryTime

 BEGIN
   _blnHistory := @FALSE
 ENDIF
```
