

ON GOTO

ON GOTO action

Function	The action implements a multiple branch.								
Declaration	ON expression GOTO Label1 [,Label2, ... ,Label10]								
Parameters	<table><tr><td>expression</td><td>in</td><td>Expression of <i>Int</i> type.</td></tr><tr><td>label1, label2, ..., label10</td><td>in</td><td>Labels. Maximum: 10.</td></tr></table>			expression	in	Expression of <i>Int</i> type.	label1, label2, ..., label10	in	Labels. Maximum: 10.
expression	in	Expression of <i>Int</i> type.							
label1, label2, ..., label10	in	Labels. Maximum: 10.							
Description	labelX - the label, to which the script jumps, where the value of the expression <i>expression</i> is X. Maximal number of labels is 10. For example, if the value of <i>expression</i> is 3, the the script jumps to the label <i>Label3</i>. If the value of the expression <i>expression</i> is greater than the label number, the script interpreter ignores the action and continues executing the following action.
