

# REBUILD\_ACC

## REBUILD\_ACC action

### Function

Handling an error occurrence.

### Declaration

```
REBUILD_ACC
```

### Description

The action completely updates access rights for all logged on users. It must be called after changing access rights (e.g. using the actions [RES\\_GROUP\\_INSERT](#), [RES\\_GROUP\\_DELETE](#)). Otherwise, changes for particular user will be applied after his/her logoff from all D2000 system processes ([D2000 CNF](#), [D2000 GrEditor](#), [D2000 HI](#), ...).

For wide configurations of access rights, the action may take some time.

### Example

```
BEGIN
    RES_GROUP_INSERT group, D.graf
    REBUILD_ACC
END
```
