XML_RemoveNode

%XML_RemoveNode function

Function	The function removes an entered node from XML document together with children.
| **Declaration** | ```
BOOL %XML_RemoveNode(
  INT in _node
  )
``` |
Parameters	**_node** Handle to XML node.
Return value	@TRUE - node from XML document was removed @FALSE - node from XML document was not removed - the function failed
Description	The function removes the entered node from XML document together with its children. Both, handle to node and handle to children, that ESL script obtained during its execution, remain valid. But this nodes are not a part of XML document.
