

StructFill

%StructFill function

Function

The function sets a value defined by the parameter *value* into items of a structure column defined by the parameter *refToColumn* within rows determined by the parameters *rowFrom* a *rowTo*.

Declaration

```
%StructFill(  
    in refToColumn,  
    in value,  
    INT in rowFrom,  
    INT in rowTo  
)
```

Parameters

refToColumn	Reference to column.
value	Value to fill into items in given column.
rowFrom, rowTo	Integer expressions.

Description

If *rowFrom*=*rowTo*=0 => the function sets the value defined by the parameter *value* in entire column. The column is defined by the reference to an item from this column (e.g. *_rec^item*).
