JAVA as a script language

Java as a script language

A programming language JAVA allows to implement the functions of applications in D2000 scripts.

Java Java Virtual Machine is built into D2000 HI and D2000 EventHandler processes. It enables to write script for both objects of Event and Picture type.

The functions, ensuring an access to D2000 System, enable to read and write the value of objects, to respond to the changes of values, to read data from databases and archives, to call remote procedures into other ESL/JAVA scripts, to call external functions, etc. .
