

XML_Item

%XML_Item function

Function

The function return the item from the list.

Declaration

```
INT %XML_Item(  
    INT in list,  
    INT in index  
)
```

Parameters

list	Handle to list of XML nodes.
index	Node serial number.

Return value

Handle to the XML node.

Description

The function returns the item from the list defined by the serial number. Items are numbered from 0.

Example

```
INT _item  
INT _listChildNodes  
_listChildNodes := %XML_ChildNodes(_el)  
_item := %XML_Item(_listChildNodes, 1)
```
