ARC_Unwrite

%ARC_Unwrite function

Function

The function suppresses writing values of specified object of Historical value type into the archive database and deletes original values.

Declaration

```
%ARC_Unwrite()
```

Parameters

None.

Description

If a value of historical value is determined by the function **%ARC_Unwrite()**, the value will not be written into the archive database and possible value with the same time will be deleted in the database.

Example

```
(H.Sinus > 0) ?
[H.Sinus] : [%ARC_Unwrite()]
```

The example above allows only writing the values which are greater than 0 into the archive database.
