

Time Programs

Time programs

The term *time program* means a system reaction (dispatching control, setting required values etc.) that depends on the time. The executive element of the time program is an object of [Time channel](#) type. The value of time channel depends on time within a particular day. These values are defined in the configuration of time channel.

Current day type of time channel is defined by the object of [Calendar](#) type. Objects of [Day](#) type are used to define the object of **Calendar** type.
