

Monitoring a Logged Process

Monitoring logged processes

Events recorded by logging, i.e. written into the log database, may be displayed in the process [D2000 HI](#).

To browse the log database in the process D2000 HI

1. Select **Logging** item from **Open** menu or click **Logging** button in the toolbar.
2. You can define requirements for information from the log database in opened dialog box „System Logging - Settings” (dialog box description [»](#)).
3. Set particular parameters to display logged data in the dialog box and click **OK** button.
