The User - Console

User - Console

The user **Console** is a special virtual user assigned to particular operator console (process D2000 HI). Special user type is given by his/her logon name. This name comprises of the name of the process D2000 HI, e.g. SELF.HIP, and the suffix **LOG**. Name of virtual user for the console SELF. HIP is then SELF.HIP.LOG. The sequence of characters ".HIP.LOG"' in the name defines, that it is a user *Console*. (Name of a user, created in the process D2000 CNF, may not include the sequence of characters mentioned before).

Special features of user Console

A object group and user's composition can be assigned to user *Console*. User *Console* is characterized by the following features:

- password definition is not allowed,
- performing special functions is not allowed,
- automatic logon to the console after starting the process D2000 HI,
- if a composition is defined, it will be displayed immediately after starting the process D2000 HI,
- user of the console defines the operator console access (process D2000 HI) to objects in the time, when no user is logged on (very important, e. g. for presentation of alarms also at the time, when no user is logged on). If a user logs on, the effective access rights to objects are given by the integration of the console access rights and the user's access rights.
