D2000 ODBC Driver

D2000 ODBC Driver is an ODBC driver, that allows the applications which use this standard interface (e.g. Microsoft Excel, Microsoft Query, Crystal Report) to access D2000 system data. It allows the access to current values of D2000 system, as well as data from the archive of historical values.

Note: Since version D2000 9.2.34 it is available only in 32-bit version.
