

Resize the Picture

Resizing the picture

A picture opened on the desktop of the process [D2000 GrEditor](#), can be resized in two ways:

- resize the picture in the "Picture settings" dialog box – the topic [Picture settings - Basic parameters](#),
- resize the picture using the mouse - the procedure is described below.

To resize the picture window using the mouse:

- To change the width, point the mouse cursor to the left or right border of the picture opened in the process [D2000 GrEditor](#). When the pointer changes its shape into a horizontal double-headed arrow, press the key Shift and drag the border to the right or left.
- To change the height, point the mouse cursor to the top or bottom border of the picture opened in the process [D2000 GrEditor](#). When the pointer changes its shape into a vertical double-headed arrow, press the key Shift and drag the border up or down.

Note

When resizing the picture below the minimal size (the parameters [Minimal size](#) - width and height) defined in the dialog box [Picture settings](#), the new size is to be automatically assigned to the parameters.
