

SendChildren

Function

The function **SendChildren** requests for the definitions of the user process children from [D2000 Server](#). The function is terminated (return from the function is performed) when all the definitions of the children are received.

Declaration

```
void SendChildren(NewDefinitionProc proc)
```

Parameters

The parameter *proc* is a pointer to the function [NewDefinitionProc](#), which will handle configuration messages. The function *SendChildren* always waits till all configuration messages are processed by the function **NewDefinitionProc**.
