

GetResourcePath

%GetResourcePath

Function

Function retrieves a path to a content of [Resource](#) object on a disk.

Declaration

```
TEXT %GetResourcePath(  
    HOBJ in _objId  
)
```

Parameters

objId	Unique identifier of Resource object. It can be gained as \HBJ attribute.
--------------	---

Return value

Return value contains the path to the *resource* object on disk, or INVALID value, if the content of *resource* is not stored on the disk (it can occur if *resource* is configured not to store the content on disk (see [configuration of resource object](#))).
