

GetUserObjName

%GetUserObjName function

Function

The function gets back a name of user currently logged in.

Declaration

```
TEXT %GetUserObjName()
```

Parameters

No parameters.

Return value

The name of user currently logged in.

Description

In the **D2000 HI** process, the return value is the name of user currently logged in, or empty string, if the user is not logged in.

In the **D2000 Event** process and during RPC procedures executing, the name is determined by scrip that is called.
