

GetSelfHBJ

%GetSelfHBJ function

Function

The function retrieves the unique identifier (HOBJ) of the object within the frame of which the script is interpreted (object of [Event](#) type or active picture).

Declaration

```
HBJ %GetSelfHBJ(  
    BOOL in bBaseHBJ := @TRUE  
)
```

Parameters

bBaseHBJ	Optional parameter. Possible values: • @TRUE - the function retrieves the HOBJ of the non-instance object, • @FALSE - the function retrieves the HOBJ of the instance object.
-----------------	---

Example

For the script of the *E.Test* event, there is valid:

```
INT _i
```

```
INT _i1
```

```
_i := E.Test\HBJ
```

```
_i1 := %GetSelfHBJ()
```

```
IF _i = _i1 THEN ; condition is always true
```

```
ENDIF
```

If given object is not open as an instance, then `%GetSelfHBJ(@TRUE) = %GetSelfHBJ(@FALSE)`.
