StrToR

%StrToR function

Function

The function converts a text to a real number.

Declaration

```
REAL %StrToR(
   TEXT in text
 )
```

Parameters

text	Function argument.

Example

If *text* is not a correctly entered real number, the function gets invalid value.

```
 %StrToR("1.23")       ; returns the value of 1.23
```
