CALL - Local Procedure Call

CALL action - local procedure call

Declaration

```
CALL ProcName [(paramIdent1  [,paramIdent2]...)]
```

Parameters

Procname	in	Procedure name (it must meet the rules for object name).
paramIdent1, paramIdent2, ..., paramIdentN	in	Value identifier for the first (second, third, .., N) parameter. Number of parameters must be identical with the number of parameters of the procedure called.

Description

CALL action is used to call a procedure with the name defined in the parameter *ProcName*. The procedure name is followed by a list of coma separated parameters enclosed between brackets. Number of parameters must be equal to the number of parameters of the called procedure. If some of the parameters is specified as an input-output one in the procedure declaration, the corresponding parameters must not be a constant.

Example

See the action PROCEDURE.
