

Database update

D2000 CfgSynchro - database update

The initial setting of copying objects for this type of synchronization prevents the newly created objects from being deleted in the destination configuration database and ensures that changed and new objects from the source database are transferred.

Initial setting of copying

Right Left	None	New	Deleted	Modified	Constant
None		←			
New					
Deleted		←			
Modified				←	
Constant				←	

←	direction of copying
	combinations that may occur, but they will not be synchronized
