Impt

%Impt function

Old name

%ImptI

Function

The function returns the accession of the given integer variable. The result is an integer number.

Declaration

```
INT %Impt(
   INT in Arg,
   TIME in ResetTime
 )
```

Parameters

Arg	Variable which accession is calculated. The function assumes, that the value of the variable Arg is increasing within the calculation interval. (For example: electrometer status).
ResetTime	Calculation reset time.
