

# PrevV

## %PrevV function

### Function

The function returns previous value of the argument. Function usefulness - eval tags.

### Declaration

```
UNIVAL %PrevV(  
    UNIVAL in Arg  
)
```

### Parameters

Arg	Expression of optional type.
-----	------------------------------

### Note

Based on the way of evaluation of eval tag the result will be:

- periodical eval tag - returns the value of argument valid during previous calculation,
- on-change eval tag - returns previous value of the argument.
